Summary

Final-year Software Engineering student at FCSE, Ss. Cyril and Methodius University, with hands-on experience in backend development using Spring Boot and Kotlin. Completed one internship and built multiple academic projects covering REST APIs, microservices, and machine learning. Published two research papers at CIIT 2025. Eager to contribute and grow within a professional development team.

Education

High School "Kosta Susinov" — High School Degree • 5.00/5
Natural Sciences and Mathematics Program — Radovish, North Macedonia • September 2017 - June 2021

Faculty of Computer Science and Engineering, Ss. Cyril and Methodius University in Skopje — Bachelor's Degree • 8.00/10
Software Engineering Student — Skopje, North Macedonia • October 2021 - Present

Experience

Digital Nomads, LLC — Skopje, North Macedonia
Software Developer Intern — June 2025 - August 2025

- Developed and maintained backend services using **Kotlin and Spring Boot**, focusing on REST API design and endpoint implementation
- Worked with relational databases for data modeling, storage, and retrieval in real production-level applications
- Explored **Ktor** as an alternative Kotlin backend framework and contributed to a **React**-based frontend, gaining exposure to full-stack workflows
- Incorporated feedback from senior developers through code reviews, improving code quality and adherence to best practices

Publications

Ontology-Based Structuring and Analysis of North Macedonian Public Procurement Contracts — Apr 27, 2025
Conference on Informatics and Information Technologies (CIIT)
Research paper accepted and published in the CIIT 2025 conference proceedings, organized by the Faculty of Computer Science and Engineering (FCSE), Ss. Cyril and Methodius University in Skopje, focusing on North Macedonian public procurement data analysis.
Student Paper Link

Comparative Analysis of Stroke Prediction Models Using Machine Learning — 2025 (Preprint)
Conference on Informatics and Information Technologies (CIIT)
Research paper prepared for conference submission, focusing on comparative analysis of machine learning models for stroke prediction, developed at FCSE, Ss. Cyril and Methodius University in Skopje.
Student Paper Link (Preprint Version)

Projects

Development of a Web-Based System for Management of Recruitment Processes with Intelligent Assistant

- Architected and developed a full-stack recruitment platform featuring an AI-powered assistant for automated candidate evaluation and decision support using Spring AI
- Designed and implemented RESTful APIs for end-to-end management of job postings, applications, and user interactions
- Integrated semantic analysis capabilities to enable intelligent candidate matching and recommendations

Tech: Spring Boot, Kotlin, REST APIs, Spring AI, React | GitHub Repository

Distributed Microservice-Based System for Managing Master's Theses at FCSE

- Designed and implemented a distributed system following Domain-Driven Design principles, decomposing business logic into independently deployable microservices
- Developed RESTful APIs for inter-service communication and built a React frontend for end-user interaction
- Containerized all services using Docker, enabling consistent deployment across environments

Tech: Spring Boot, Kotlin, Docker, REST APIs, Microservices, DDD, React | GitHub Repository

Semantic Web-Based Public Procurement Analysis System

- Built a web platform for structured analysis of North Macedonian public procurement data, applying RDF-based ontology modeling and SPARQL queries for semantic data retrieval
- Developed interactive data visualizations to surface procurement trends and patterns
- Research outcomes accepted and presented as a student paper at the CIIT 2025 conference

Tech: Python, Django, RDF, SPARQL, Bootstrap | GitHub Repository

Machine Learning-Based Stroke Risk Prediction

- Designed and trained a stroke risk prediction model using scikit-learn, applied on real-world patient data with full preprocessing and feature engineering pipeline
- Conducted comparative evaluation of multiple ML algorithms, analyzing performance metrics to identify the most accurate model
- Research results accepted and presented as a student paper at the CIIT 2025 conference

Tech: Python, scikit-learn, Pandas | GitHub Repository

Dockerization and Orchestration of a Spring Boot Application with CI/CD and Kubernetes

- Containerized a Spring Boot application using Docker and configured automated CI/CD pipelines for streamlined build and deployment workflows
- Implemented basic Kubernetes orchestration to explore scalability and service management in a distributed environment
- Improved deployment consistency and reduced manual intervention in the release process

Tech: Docker, Kubernetes, Spring Boot, Java, CI/CD | GitHub Repository

Skills

Technical Skills

Backend Development: Java (Spring Boot), Kotlin (Spring Boot, Ktor), Python (Django, Pandas, Scikit-learn)

Web & APIs: REST APIs, Django, React, Bootstrap

Databases: PostgreSQL, MySQL

Tools & Technologies: Docker, Git, CI/CD

Concepts: Microservices Architecture, Distributed Systems, Machine Learning
